DRYER AND POLISHER FOR CARS, TRUCKS, BUSES

Technical information

High-performing product, ideal for manual and self-service car-washing, it makes the drops of water fall from the car body immediately, thus making the drying easier and leaving just few drops that can be easily removed with a cloth. The product leaves a protective polishing non-greasy film on the surface. 8-10 gr. per car are enough to reach an excellent result.

CHEMICAL COMPOSITION: Mixture of non ionic cationic surface active agents, water-soluble solvents, adjuvants, polishing compounds and water.

PH: ph 5,8 in dilution 1/20 with water

DIRECTIONS FOR USE:

VENTURI SYSTEM:

Thin 1:20-30 with water, adjusting the mixing device at minimum level and keeping a low water pressure.

WITH HIGH PRESSURE CLEANER:

Dilute 1:40/50 with water and intake through Venturi distributor, the final dilution with water should be 1:600/800.

BY HAND-WASHING:

Add 20-30 gr. of product to 7/10 lt. of water and pour the mixture on the car. Mop the few drops left on the surface with a cloth, so as to prevent limestone deposits or shadows on the car body.

WARNING: the product could change its look if exposed at a low temperature (-10° C). In this case warm it lightly and shake before use.

PACKAGE: canisters size lt. 12 - 25
