WHEEL RIMS CLEANER

Technical information

The product is suitable for cleaning cars' wheel rims. It cleans encrustation and dirt thoroughly, without any handiwork, just spray it uniformly on the surface and rinse with high pressure cleaner. It removes oxide and leaves the surface perfectly cleaned and polished. The product is suitable for wheel rims of any type: both painted or light alloy ones.

CHEMICAL COMPOSITION: Mixture of non ionic surface active agents, phosphoric acid, corrosion inhibitors, inhibited minor acids, adjuvants, complexing agents, water.

PH: $\text{ph} < 1$

DIRECTIONS FOR USE:

WITH TRIGGER SPRAYER:

Thin the product 1:2-3 with water, spray it uniformly over the surface and rinse with high pressure water. For hard-to-remove dirt, pass with a brush or a sponge.

WITH BRUSH:

Thin the product 1:2-3 with water, carefully apply over the surface, even into small cracks, rinse abundantly with water

WARNING: the product is irritant for eyes and skin if in contact on pure solution. No danger in normal conditions. We suggest cooling wheel rims made of light alloy in summertime.

PACKAGING: canisters size kg. 12 - 25 – spray version: 200 ml
