# 080F FLOCCULIT

## Separator and flocculant

### Technical information

Floculit is used for its multi-purpose capabilities in all types of chemical-physical depuration plants. All the inert substances in waste water turn into medium-sized flakes, reaching a net separation, without leaving any residue in waste water. It is fit for depurators, substituting poly electrolytes and ferric chloride.

**CHEMICAL COMPOSITION:** Mixture of chemical sulphate hydroxide-based flocculants and separators.

**PH:** ph 1 in dilution with water 1/20

**DIRECTIONS FOR USE:** let automatically intake the pure product directly from the depuration plant.

**WARNING:** irritant for eyes and skin, keep attention. In order to have the right pH in the waste water, it is suggested to use it with PH CONTROL B.

**PACKAGE:** canisters size kg. 12 - 25
