092 BIO - POLISH

DRYER-POLISHER FOR CAR-WASHING PLANTS

Technical information

Special product for the brightness and for quick drying of cars by automatic washing plants.

Thanks to its water-repellent chemical composition it protects the car-body forming a very thin and non-greasy film on it. It makes the car bright and it helps water drops sliding on the car-body. Furthermore, it grants a powerful molecular protection.

Bio-Polish does not leave any greasy film on glasses and windscreen, thus granting an excellent visibility, by day and by night.

The product has been formulated in accordance with the regulations against pollution; indeed, thanks to the high-quality surface active agents here contained, the good balancing of water-soluble solvents and the absence of mineral oils, it is suitable for new plants equipped with recycling water conditioners.

CHEMICAL COMPOSITION: Mixture of non ionic and cationic tensides, alcohol solvents, waxes, water.

PH: ph 5,5

DIRECTIONS FOR USE:

AUTOMATIC CAR-WASHING PLANTS

1) **PULSE COUNTER SYSTEM:**

Intake the pure or diluted (1:2/3 with water) product, keep the pulses' frequency between 10 and 40, keep the final dilution with water approximately on 1:500/1000.

2) **VENTURI SYSTEM**

Dilute 1:30-50 with water, keep the mixer at minimum level. Keep water pressure at a low level as well.

WITH HIGH PRESSURE CLEANER:

Dilute the product 1:40/50 with water and intake through Venturi measuring device, considering a final dilution of 1:600/800.

WARNING: the product could change its look if exposed at a low temperature (-10° C). In this case warm it slightly and shake before using.

PACKAGE: 25 – 12 lt. canisters
